
22 April 2026

To whom it may concern,

This is to certify that **Ms Jagjeet Kaur Sandhu** has been employed on a **full-time** basis with **Flooring Junction Pty Ltd** since **19 September 2025**. She is appointed as a **Software Support Engineer**. Her employment is carried out under standard working hours of 38 working hours per week with a salary of **\$90,000 per annum**.

In her role, **Ms Sandhu** performed the following duties:

- Designed and developed a web-based Carpet Planner application using React, enabling customers to visualise flooring layouts and product selections interactively prior to purchase.
- Built and maintained a Floor Manager software system using Java and Python to streamline internal job scheduling, task tracking, and installer coordination workflows.
- Developed a comprehensive stock inventory management system to monitor warehouse carpet levels, purchase orders, and product turnover in real time.
- Implemented a demand forecasting module using Python-based machine learning techniques to predict carpet stock requirements and optimise warehouse inventory based on historical sales data and customer purchasing behaviour.
- Engineered integrated back-end processing pipelines in Python to handle data ingestion, business logic execution, and automated reporting across flooring operations.
- Integrated React front-end interfaces with Java and Python back-end services to deliver seamless user experiences across internal and customer-facing applications.
- Designed and maintained relational database schemas to support inventory records, customer data, and operational reporting workflows.
- Translated flooring business requirements into functional software specifications and implemented corresponding technical solutions aligned with operational needs.
- Conducted structured testing and debugging of application features to ensure reliability, data accuracy, and performance stability across production environments.
- Developed regression testing workflows to ensure system stability following application updates, tracking and resolving discrepancies in software outputs.
- Collaborated with operations staff to iteratively refine software features, improving workflow efficiency and system usability across the business.
